48 HOUR PATCH TEST
SKIN IRRITATION EVALUATION
(Occlusive Patch)

AMA Ref. No.: MS11.48HR.M0355O.50.DPS

Date: July 1, 2011

Sponsor: Deutsche Pharma S.A.
Avd. La Concepcion # 56
Office 307-308-309
Providencia Santiago de Chile
Chile

1.0 Objective:

Consumer products or raw materials designed for consistent reapplication to areas of the skin may, under proper conditions, prove to be contact irritants in certain individuals. It is the intention of a 48 Hour Patch Test to provide a basis for evaluation of this irritation potential if such exists.

2.0 Test Material:

2.1 Test Material Description:

On April 28, 2011 one test sample labeled SUNWORK Gel 191041M was received from Deutsche Pharma S.A. and assigned AMA Lab No. M-0355.

2.2 Handling:

Upon arrival at AMA Laboratories, Inc., the test material is assigned a unique laboratory code number and entered into a daily log identifying the lot number, sample description, sponsor, date received and tests requested.

Samples are retained for a period of three months beyond submission of final report unless otherwise specified by the sponsor or, if sample is known to be in support of governmental applications, representative retained samples are kept two years beyond final report submission.

Sample disposition is conducted in compliance with appropriate federal, state and local ordinances.

12.0 Conclusions:

The test material (AMA Lab. No.: M-0355; Client No.: SUNWORK Gel 191041M) when tested under 48 hour occlusive patching conditions as described herein, may be considered: a **NON-PRIMARY IRRITANT** to the skin.
